
TYRONE STORMWATER NEWS UPDATE

SUMMER 2018

BRAD KONWICK, ENVIRONMENTAL
DEPARTMENT

During summer, most people think about recreational activities in the sun and water. However, it is also the greatest risk of algae growth in waterways due to the warm temperatures and fertilizer (nutrient) applications on our landscapes. One way these nutrients can enter our stormwater system is through intentional discarding of grass clippings into stormwater drains. The [attached](#) outlines best management practices for managing your grass clippings during the summer.
